Chapter 2 Introduction to JavaBeans

1.   For a class to a JavaBeans component, the class must be: 1.public, 2. with a public default constructor, 3. serializable. A JavaBeans components is a Java class, but a Java class is not necessary a JavaBeans component.

2.   To install a JavaBeans component into the component palette, first compile it and then right-click the component in the Explorer, choose Tools, Add to Component Palette.

3.   The component inspector is in Form Editor in Forte 4.

4.   The get method for a non-boolean property is getProperty(), and the get method for a boolean property is isProperty(). The set method is setProperty(type newProperyValue).

5.   Property types can be classified into: simple, indexed, bound, and constraint.

6.   Not necessarily.

7.   No. For a property to appear in the component inspector in Forte, it must have both get and set methods.

8.   Yes.

9.   No.
